

NetworX NX-540E *"Operator" Telephone Interface Module*

Overview

The NetworX "Operator" is a microcomputer controlled telephone interface module that may be added to NetworX control panels. The "Operator" converts any touchtone telephone to a system keypad and allows system functions to be accessed via telephone on premise or off-site. There are 48 separate zone descriptions that may be programmed to fit the owner's needs. In addition, the "Operator" will control up to 32 X10 modules (requires only one X10 Pro PSC04 Interface Module per NetworX system) with programmable descriptions for each. Each zone/output description is programmable using the 182-word library list.

Standard Features

- **Converts any touchtone telephone to a system keypad**
- **Allows system functions to be accessed via telephone on or off-site**
- **Can control up to 32 X10 modules (requires 1 X10 Pro PSC04 Interface module per NetworX system) with programmable descriptions for each**
- **Each zone/output description is programmable using the 182 word library list**
