

## How can I control Nucleus with Alexa?

You can use Alexa voice commands to perform actions on your Nucleus devices, like placing calls and dimming the screen. These commands and the Nucleus skill will only work on a Nucleus device; you won't be able to use an Echo or Echo Dot to issue commands to a Nucleus device, for example.

### Enable the Alexa skill for Nucleus

To start using this feature, ensure you're logged into Alexa on your Nucleus. Then have Alexa add the Nucleus skill:

***“Alexa, enable the Nucleus skill.”***

You should hear a confirmation that the skill has been enabled, and a sample command. If Alexa reports that she cannot help, check your software versions in Settings and ensure they are up to date.

If any of your versions are older, reboot. This will force your Nucleus to look for the latest updates immediately. If you have any questions or want to share how the feature is working for you, you can always reach contact [support@nucleuslife.com](mailto:support@nucleuslife.com)!

### Use commands to initiate calls

With the skill enabled, you can initiate calls to individual Nucleus devices and the mobile app. If you have a device named Kitchen, for example, saying

***“Alexa, tell Nucleus to call Kitchen”***

will initiate a video call with that device. Video calls are the default, but if you'd like an audio call, you can say

***“Alexa, tell Nucleus to audio call Kitchen”***

or

***“Alexa, tell Nucleus to call Kitchen audio only”***

For all commands to control Nucleus, make sure you include “tell Nucleus.” Alexa won’t know what to do with the command otherwise.

## **Use commands to change Nucleus settings and get help**

You can also use Alexa to cause the Nucleus screen to sleep. It will still be available for calls, and you can turn the screen back on by tapping the On/Off Button or by issuing another Alexa command.

***“Alexa, tell Nucleus to dim the screen”***

or

***“Alexa, tell Nucleus to sleep”***

will both darken the screen.

You can also ask for help to see what the skill supports.

***“Alexa, tell Nucleus to ask for help”***

Additional capabilities and updated information will be added over time.
