

Box Buddy[®]

Low Voltage Mud Rings

Pro-Wire's **Box Buddy** low voltage mud rings are designed to position low voltage devices immediately next to 110 VAC electrical boxes while maintaining the standard spacing necessary so that both 110 and low voltage devices may be covered with one multi-gang cover plate for an elegant appearance. Box Buddy mud rings are supplied with a patented pull-off alignment tool for simple and quick installation that ensures that the high and low voltage devices will be properly positioned to fit behind a multi-gang cover plate.

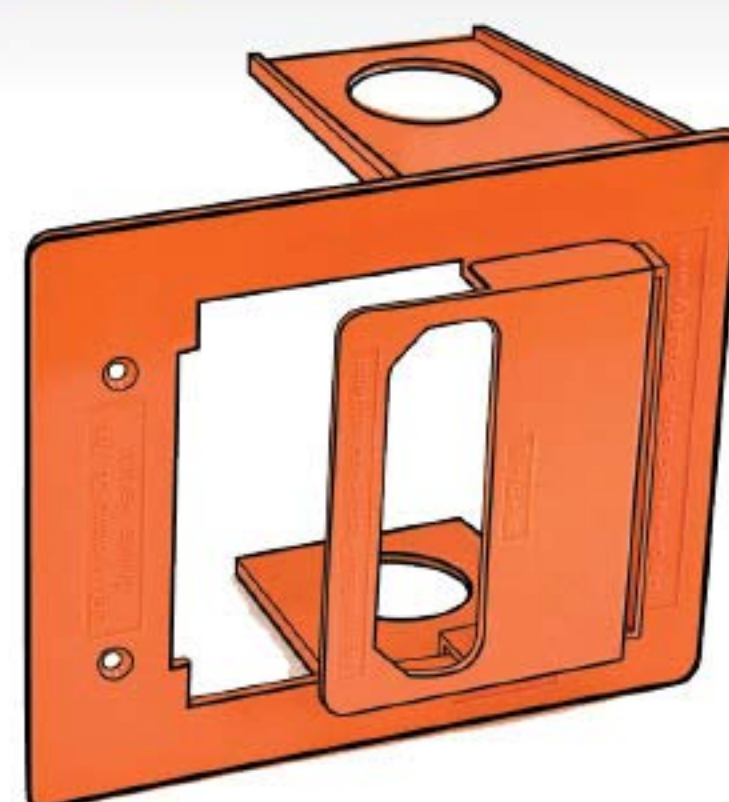

Pro-Wire's **MR Series** multi-gang mud rings are ideal for mounting a wide variety of low voltage devices. They feature 1" and 2" conduit openings and offset flanges that allow for the unobstructed installation of electrical devices.
