WA-900 SUPERVISED 900MHz Wireless WANDERER ALERT™

WORKS AUTOMATICALLY!

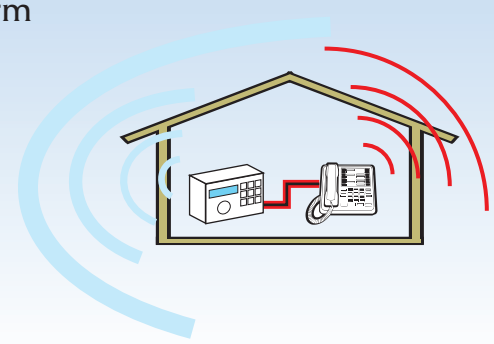
Detects patients wandering away and then sounds the alarm and calls for help!

1 Transmitter Only Per WA-900 System.

NOW YOU CAN PROTECT YOUR LOVED ONES AND PATIENTS FROM WANDERING AWAY!

WANDERER ALERT™

The pendant Transmitter automatically sends a signal every 3 seconds to the receiver-dialer. If the receiver doesn't hear from the pendant within an adjustable period, (indicating patient has traveled a distance away) the receiver-dialer will automatically sound the alarm strobe and/or dial emergency numbers and deliver the emergency message.



WHEN ACTIVATED...

The Wanderer Alert automatically detects wandering, sounds the alarm and calls to deliver the message for help to:

✚ Family or neighbors

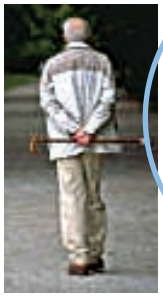
✚ Emergency services
(local regulations permitting)

✚ Health Care Providers

✚ Cellular phones and pagers

Wireless 900 MHz Technology comes to the rescue of loved ones and patients

How It Works:



Wanderer Alert Automatically Sounds the Horn Strobe and calls for help, even if care provider is away! No Monitoring Fees!

1. The wireless pendant is attached to the patient with a non-removable band and sends a continuous signal to the Wanderer Alert unit every 3 seconds.

2. When the patient attempts to wander away, the Wanderer Alert unit detects the missing signals and sounds the horn/strobe alarm and/or dials the telephone, cell or pager numbers that you have installed and leaves your message in any language. A switch on unit allows you to select dial out.

3. The Wanderer Alert system is capable of monitoring both High Risk and Low Risk patients.

High Risk Patients

Patients that are high risk to wander away.

For High Risk patients, turn Range Dial Left or CCW until desired Safe Area or Roaming Range is satisfactory. The pendant will activate Wanderer Alert when patient wanders from unit, allowing patient to move throughout home or living area.

Pendant may be Worn on Wrist or Ankle, Using Supplied Band.

Low Risk Patients

Patients that are low risk to wander away.

With Low Risk patient, turn Range Dial Right or CW until desired Safe Area or Roaming Range is satisfactory. This allows them to move throughout living areas and into garage, and areas such as the yard, garden and to the mailbox. Wanderer Alert will activate when patient wanders form the unit.

1 Transmitter Only Per WA-900 System.

Order Information

Model	Description
